The Optimal Repair Solution - Wheel Bearing Kits from febi

Wheel bearings are common wear parts. Depending on the load and road conditions, they need to be replaced sooner or later. If they make noise, the wheel has excessive play, or even if the wheel hub gets hot, it's time for a workshop visit.

With its patented wheel bearing kit febi 170317, febi offers the optimal repair solution. It is easy to fit and requires no maintenance. It is calibrated, pre-adjusted, and correctly assembled with all components. For a long service life under the most difficult operating conditions, it is already pre-greased with quality grease.

In addition to the wheel bearing kit febi 170317 which is suitable for many SAF axles, febi offers an extensive range of wheel bearings and wheel bearing kits in OE matching quality for common European commercial vehicles and trailers.
