

**To Fit:**

Scania Vehicles  
Repl. no. 2 052 119 SK

## Full Side Lighting on the Scania With the Adapter Cable from febi

Scania trucks are usually equipped with only one side marker light in the side panel. A second light is visible, but it has no internal components and functions only as a reflector. To retrofit a second, functional side marker light replace the empty housing/reflector with the matching side marker light (febi 174984, to fit Scania 2 052 119). To connect this second side marker light to the vehicle's power supply, the adapter cable febi 171354 is required. This is connected to the original connector of the first side marker light and to both lights. This way, both side marker lights are easily connected to the vehicle's electrical system with the appropriate plug via the original connector, without making any changes to the wiring harness or the vehicle's electrical system.

In addition to the adapter cable, febi also offers the matching side marker light febi 174984, to fit Scania 2 052 119. In addition to side marker lights, febi also offers a broad range of LED work lights, beacons and strobe lights in OE matching quality for all common applications in the commercial vehicle sector.
