

febi 40215/40213

To fit:

EvoBus Citaro, Setra S415NF

Ref. no. 628 320 09 89 S1/ 628 320 08 89 S1

front, left

front, right

Stabiliser link rod's for Buses

Stabilisers are used to compensate rolling movements about the longitudinal axis of the vehicle when cornering and therefore ensure driving safety and ride comfort. Stabiliser link rods connect the stabiliser to the chassis, they are standard wear parts in the steering and suspension parts range.

In the independent aftermarket, two different versions are available:

The old version with ball joints, connected by a pipe and the new version with a twisted aluminum strut and larger rubber mounts. febi delivers the new version, which has improved durability and stability over the old version due to the larger rubber bearing. Of course, the required lock nuts are included.

More information about febi ProKits for commercial vehicles can be found at: www.febiprokit.com

OLD

NEW

febi 30272

to fit:
Mercedes-Benz O345 Conecto,
O530 Citaro
Ref. no. 628 320 10 89 S1

front, left

febi 30273

to fit:
Mercedes-Benz O345 Conecto,
O530 Citaro
Ref. no. 628 320 11 89 S1

front, right
