

NEW PRODUCT HIGHLIGHT | JAN2023 SWAG 33 10 2845

SWAG[®]

To fit:
Alfa Romeo Mito 1.4T, Fiat Grand
Punto, Punto 1.4T

EN

Transmission mount

Function

The main purpose of the mount is to connect and support the engine and transmission to the vehicle's body. However, it also helps reduce the amount of noise, vibration and harshness (NVH) generated by the engine and transmission - improving the comfort and ride for both the driver and passenger(s).

Cause of failure

Harsh operating conditions, constant hot and cold cycles, vibrations from the engine and transmission, and shock loads from driving on rough roads all contribute to a potential failure. On the models listed in this article, the rubber can start to shear - once this begins it will get progressively worse. It can be felt by the driver as a 'judder' when accelerating or decelerating and feels even poorer in the lower and/or reverse gears. When severely worn, the quality of gear changes is also affected.
