

# MANN-FILTER

## Product Information

No. 147  
06/04/2020

### Doubled due to great demand: HU 711/6 z and HU 7044 z

The HU 7044 z remains as an alternative to the existing oil filter HU 711/6. This enables MANN-FILTER to meet the great demand if necessary.

Please be informed you can use both filters for the same application.

**HU 711/6 z**

**HU 7044 z**

### What's the difference between the two oil filters?

The two oil filters differ in the manufacturing process and the sealing concept. Whilst HU 711/6 z has foil end-discs, the new HU 7044 z features welded plastic end-discs.

No difference though in filtration performance. Both oil filters are tested and released according to the respective specification.

Please use our oil filters as listed in our MANN-FILTER catalogues.

**Drive safely with MANN-FILTER – with HU 711/6 z or HU 7044 z!**
