

BMW MINI R50 1.6i 2001>04 GEAR CONTROL CABLE SELECTION

CABLES

Issue Date: 08/02/19 Issue Number: CATB0009B

APPLICATION: BMW MINI R50 1.6i, 2001 > 07/2004

APPLICABLE REFERENCES: BKG1125, BKG1126

IDENTIFYING CONDITIONS

On the early BMW MINI R50 there is a choice of Gear Control Cables. MINI refers to these choices as 'Condition A' or 'Condition B', however there is no specific information to support what this actually means.

The only way to identify whether you require the cable suitable for 'Condition A' or 'Condition B' is to physically look at the Gear Shift Housing where the cable connects. There are two very clear differences which will help you identify which condition you have.

AT A GLANCE

CONDITION A

Selector Cable Length for
'Condition A' = 1000mm
Insert Cable Length for
'Condition A' = 1100mm

Due to the limited demand for cables used on vehicles with the 'Condition A' set-up, Borg & Beck only supplies cables for vehicles with the 'Condition B' set-up

As you can see in the image, the colour of the housing is white/light beige and there are some clear reinforcement ribs

CONDITION B

Selector Cable Length for
'Condition B' = 963mm
Insert Cable Length for
'Condition B' = 1055mm

Selector Cable (used for reverse gear) = BKG1125
Insert Cable (used for forward gears) = BKG1126

The colour of the housing is black, and it has a smooth sloping front as you can see in the image.
