

# Adapter, container (brake fluid filling)

These brand-specific filling adapters are required to pump the brake fluid into the expansion tank of the brake master cylinder under certain pressure. This is necessary whenever the brake fluid is replaced or the hydraulic brake system has to be bled after a component replacement.

- this set covers at least 92% of all vehicles.
- also suitable for electric vehicles, e.g. Nissan Leaf
- high-quality workmanship in aluminium
- 90° angled connection with quick coupling
- connection with quick coupling can be rotated 360°

**Material:**
